ABOUT ME

I'm a software developer currently working at evolv Consulting. In my current role, I work on a fraud detection REST API for Sofi using Javascript and the decisioning platform Provenir. I am responsible for strategy implementation, QA automation, and test case creation, among other system enhancement tasks. More about my professional and personal project experience can be seen below.

SKILLS & PROFICIENCIES

- Java, C++, JavaScript
- Postman testing automation
- Microservices (REST APIs, MVC)
- Spring
- Spring Boot
- Thymeleaf
- Kafka (Java, Spring, CLI)
- SQL (Snowflake, MySQL, Microsoft, Oracle, PostgreSQL)
- NoSQL (MongoDB, Mongoose)
- Plaid API
- Apache Avro
- Android (Java, XML)
- Docker (docker-compose, Docker)
- Web Development (HTML, CSS, JS, Express, Node.js)
- Git/GitHub/GitLab
- Apigee
- AWS Certified Cloud Practitioner (CCP)

PERSONAL PROJECTS

Portfolio: <https://leeamshutzman.github.io/>

Work Tracker 2021

- Simplifies tracking freelance work hours by utilizing a mobile app, a website, an SQL database, a Node.js server, Express, and EJS

Cool Guy App 2021

- Streak keeping Android app for how many days in a row the user has been productive
- Utilizes daily notifications to prompt the user

Professor Rating App 2020

- Android based app for rating professors within Webster University
- Google Firebase Realtime Database Movie Kiosk

Oracle APEX Application 2020

- Year long project for Database Concepts/Applications class
- Designed and implemented relational database schema

Paperless Parking Ticketing System 2019 - 2020

- Semester project for System Analysis and Design class
- Analyzed current ticketing system at Webster University and designed new paperless system
- Android based QR code scanner prototype.

WORK HISTORY

Software Consultant

evolv Consulting (Client - SoFi)

June 2023 - Present

- *Client - SoFi*
 - Used Javascript and Postman to automate QA testing of REST APIs
 - Used Javascript and the decisioning tool Provenir to implement changes to a fraud detection API
 - Worked on automated testing pipelines using Gitlab
 - Used Snowflake and Apache airflow for querying
 - Worked on various system enhancement projects that involved Python and bash scripting
 - Test case creation using Google Sheets

Software Developer

Cognizant

January 2022 - March 2023

- Designed and developed a bandmate-finding web app that uses REST API endpoints to serve static resources such as audio files and photos.
- Developed RESTful Microservices for an e-commerce app using Spring Boot, a Eureka service registry, an API cloud gateway, a Cloud config server, a MySQL database, and Kafka messaging.
- Implemented the CQRS pattern with Event-sourcing using Spring boot while using Kafka as the event store and a MongoDB NoSQL database for read operations. Records were sent using a specific Avro schema

Chess Summer Camp Counselor

Webster University

June 2017 - July 2019

- Assisted in keeping children safe between and during various activities
- Transported and distributed required materials
- Daily meetings to discuss issues and ways to improve the experience for both the staff and the campers

EDUCATIONAL BACKGROUND

Bachelors of Science: Computer Science

Webster University - St. Louis, MO

2018 - 2021

- Minored in Math
- Represented Webster at International Collegiate Programming Contest 2019
- Represented Webster at CHECC CyberCup 2019
- Represented Webster at Deloitte Capture the Flag Competition 2019
